

Hydrilla Survey Connecticut River

This stretch of CT River was surveyed by GZA for the Mass DCR in November of 2018. One small patch of hydrilla was found just north of the MA/CT line. Other invasives were found throughout the stretch including curlyleaf pondweed, Eurasian watermilfoil, European watercress, fanwort, and water chestnut. The Mass DCR also surveyed from the Barton's Cove boat ramp up to the Northfield boat ramp and found no hydrilla.
