

## **2008 NEDC/DERA Grant**

In 2008, following a competitive process, DEEP received a National DERA award to retrofit its fleet of maintenance equipment and some air compressors used on Connecticut Department of Transportation (CT DOT) construction sites with aftermarket emission control technologies.

The DEEP retrofits were completed in the fall of 2009.

The air compressor project was not carried out due to cost-related issues for emission control technology for the air compressors, but subsequent amendments to the funding award allowed CT DOT to install aftermarket emission controls on some of its maintenance trucks with funds from the grant. This was completed in December of 2010.
