

FY2008 MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS – DETAILED REPORT
 Updated 10/6/2011 by the Connecticut Department of Environmental Protection Bureau of Materials Management & Compliance Assurance

- Please read [data qualifiers](#) listed at the end of this document.
- **Recycling data** in this report is based on the FY2008 Annual Municipal Recycling Report Submitted to the Connecticut Department of Environmental Protection by the municipality. Due to a variety of issues, not all towns accurately report the recyclables recovered from their towns. Starting in FY2009 tonnage of bottles, cans, and paper recycled will be based on solid waste facility reports rather than the municipal reports.
- **Disposal data** is based on reports submitted to the Connecticut Department of Environmental Protection by Connecticut solid waste transfer stations, resource recovery facilities and landfills.
- **Notes:** “**Combined**” = Residential + Non-residential + Mixed Residential & Non-residential; **PPY** is pounds/person/year
- **Questions?** E-mail [Judy Belaval](mailto:Judy.Belaval) or call at (860) 424-3237

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

*Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality has a reported MSW per-capita disposal rates greater than 2400 PPY – which seems high and might indicate inaccurate reporting of MSW disposed or transferred. However in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc. Those towns with an * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

° This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated

This is an example of a town under-reporting material collected for recycling – Connecticut recycling facilities actually reported higher tons of material than reported by the municipality. Connecticut recycling facilities reported receiving the following recyclables generated in the town of Clinton in FY2008:

Town	Item	Name	Tons RES	Tons NONRES	Tons Mixed Res&NonRes	Total (Combined)
CLINTON	BOTTLES/CANS/PAPER (DUAL STREAM)	ESSEX TRANSFER STATION (CRRA)	318.00	0.00	0.00	318.0

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them. Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated

* Tonnage disposed amended

**Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to inflated and inaccurate recycling percentages. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to inflated and inaccurate recycling percentages. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality has a reported MSW per-capita disposal rates greater than 2400 PPY – which seems high and might indicate inaccurate reporting of MSW disposed or transferred. However in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc. Those towns with an * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated

o This municipality has a reported MSW per-capita disposal rates greater than 2400 PPY – which seems high and might indicate inaccurate reporting of MSW disposed or transferred. However in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc. Those towns with an * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages.

This is an example of a town under-reporting material collected for recycling – Connecticut recycling facilities actually reported higher tons of material than reported by the municipality. Connecticut recycling facilities reported receiving the following recyclables generated in the town of Old Saybrook in FY2008:

Material Reported Received by Recycling Facility	Reporting Facility	Tons RES	Tons NONRES	TonsMixed	Tons Combined Res+NonRes+Miixed

° This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

This municipality may have submitted an incomplete recycling report

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

° This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to ***inflated and inaccurate recycling percentages***. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

o This municipality had a reported MSW per-capita disposal rates less than 600 PPY – which might indicate inaccurate or incomplete reporting of MSW disposed or transferred and consequently might lead to *inflated and inaccurate recycling percentages*. Towns with an asterisk * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages. However, these towns may still have inaccurate MSW disposal rates and consequently inaccurate recycling rates attributed to them.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

° This municipality has a reported MSW per-capita disposal rates greater than 2400 PPY – which seems high and might indicate inaccurate reporting of MSW disposed or transferred. However in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc. Those towns with an * next to their MSW disposal tonnages indicates that some correction was applied to the reported MSW disposal tonnages.

* Denotes Disposal Tonnage for this Town Not Based on Disposal Facility Reports – May be Estimated
 ** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

MUNICIPALITY REPORTED RECYCLABLES - DETAIL REPORT; Town Specific

FY2008 QUALIFIERS FOR DATA USED TO CALCULATE MSW RECYCLED & DISPOSED from Each Connecticut Municipality

Recycling Data Qualifiers:

- ◆ Recycling data is based on the FY2008 Annual Municipal Recycling Reports submitted to the CT DEP.
- ◆ Tonnages of non-residential material recycled **are generally under-reported**; although towns submitted recycling reports to DEP, some did not include the tonnage of all the materials generated within their town and recycled because those figures are often difficult to obtain.
- ◆ Tonnages generally **do not** include glass, metal, and plastic recycled through the bottle deposit law infrastructure.
- ◆ Tonnages **do not** include: most of the commercially recycled scrap metal, automobile scrap metal, waste oil recycled by businesses or garages, or most of the storage batteries which are recycled through the storage battery deposit infrastructure.
- ◆ Tonnages generally **do not** include material backhauled by retail chains to out-of-state distribution centers for recycling or any other recyclable material which does not pass through a permitted CT solid waste/recycling facility.
- ◆ The tonnage of leaves or other yard waste recorded as being recycled at municipal sites is usually estimated on the basis of cubic yards. The reliability of the conversion factor may be affected by the moisture content of the leaves and other material.
- ◆ Starting in FY96 an attempt was made to estimate tonnages of yard and food waste backyard composted or “grasscycled”. Those estimates are reported as “HomeComposted”.
- ◆ Tonnage of landclearing and demolition material recycled is not included in the MSW statistics
- ◆ Tonnages of material reported as “recycled” reflect the amount of MSW reported collected for recycling - not necessarily the amount actually used to make products. Contamination may be disposed at either the recycling processing facility or at the mill or manufacturing facility using the material to make a product and is not subtracted from the tonnages reported recycled by each municipality.

MSW Disposal Data Qualifiers

- ◆ FY2008 MSW disposed for each municipality is based on data submitted to the CT DEP by CT permitted solid waste facilities and is contingent upon the accuracy of reporting by both the facility and the haulers delivering the MSW to the facilities.
- ◆ Data regarding MSW hauled directly out-of-state for disposal is not reported to DEP. Therefore, there may be additional disposal tonnages attributable to some towns.
- ◆ Tonnages of MSW do not always include the tonnage of bulky MSW (furniture, carpets, etc.) which is often reported to DEP as “bulky waste” or “construction and demolition (C&D)” waste.
- ◆ MSW disposal figures represent residential and non-residential disposal.

Comparing Town Recycling Rates

Please keep in mind that it is somewhat misleading to judge the success of a municipality’s recycling program by arbitrarily comparing one town’s recycling rate to that of another town because:

- 1) Recycling potential varies from municipality to municipality and can be affected by the town’s demographics.
 - For example – towns with higher per capita incomes tend to generate more newspapers and magazines – which contribute to higher potential recycling rates.
 - Recycling in multi-family dwelling can present greater challenges – but can be successful with the implementation of effective recycling strategies.

2) Connecticut solid waste facilities do not always accurately report the town of origin of MSW received for disposal or for recycling. When that occurs, a town's MSW disposal rate and/or recycling rate may be over or under reported. Since the % MSW recycled for a city/town is based on both the MSW disposed and the MSW recycled, inaccurate municipal MSW disposal rates will result in inaccurate municipal recycling percentages.
