

MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS – DETAILED REPORT
Updated 3/2/2011 by the Connecticut Department of Environmental Protection Bureau of Materials Management & Compliance Assurance

Notes about the Data Presented Below

Data presented below was updated on March 2, 2011 by the Connecticut Department of Environmental Protection Bureau of Materials Management & Compliance Assurance – Questions? Please contact [Judy Belaval](#) at the CT DEP Bureau of MM&CA or call (860) 424-3237.

♦ **MSW Recycling data** in this report is based on (1) the tonnage of bottles, cans, and paper reported received for recycling from CT municipalities by CT solid waste facilities permitted to process or transfer recyclables, and (2) tonnage of other material reported recycled by CT municipalities (as reported on their FY2009 Annual Municipal Recycling Report). The tonnage of MSW recycled includes both “[designated recyclable items](#)” and other MSW recyclable items and also includes material reported reused through municipal swap areas.

♦ **MSW Disposal data** used to calculate recycling rates in this report is based on (1) tonnage of MSW generated within the borders of CT municipalities and reported received for disposal and/or transfer to disposal by CT solid waste transfer stations, resource recovery facilities and landfills and (2) tonnage of MSW reported disposed on the FY2009 Annual Municipal Recycling Reports. It includes MSW generated by both the residential and non-residential sectors. It does not include wastes such as construction and demolition wastes, industrial sludges, or land-clearing debris.

♦ MSW disposal and recycling tonnages would likely be underestimated for those CT towns or cities if their MSW and/or recyclables were delivered directly to an out-of-state destination or directly to an end market without first going through a CT permitted SW facility. If disposal tonnages are under reported, the MSW recycling rate for that town would be over-estimated since the percent recycled = tons recycled/(tons recycled + tons disposed).

♦ The accuracy of the data present below is contingent upon the accuracy of the data submitted to the CT DEP by the reporting entities identified above.

♦ **PPY**= pounds/person/year

♦ **Combined** = (Recyclables Reported as Residential) + (Recyclables Reported as Non-Residential) + (Recyclables Reported as Mixed Residential and Non-Residential)

♦ **Percent MSW Recycled** = (Tons MSW Recycled)/ (Tons MSW Recycled + Tons MSW Disposed)

♦ **Percent Combined of Total MSW Recycled** = (Tons of specific material recycled)/(Total tons all items recycled)

[Please note data qualifiers at the end of this document.](#)

To find data for a specific municipality – type the municipality name in the search box in toolbar at the top of the screen

MUNICIPAL SOLID WASTE (MSW) RECYCLING DATA FOR CONNECTICUT CITIES & TOWNS – DETAILED REPORT
 (Based on the FY2009 Annual Recycling Report submitted by the municipality
 and reports from CT Recycling Facilities, Resource Recovery Facilities, Land Fills and Transfer Stations)

PREPARED BY CT DEP BUREAU OF MM&CA - RECYCLING OFFICE
 FY2009 (07/01/2008 - 06/30/2009) - Report Prepared on Monday, May 02, 2011

° This municipality has a really high MSW disposal rate. This may be due to data quality issues; however in many cases, these higher disposal rates can be attributed to demographics i.e. large number of businesses, manufacturers, universities, casinos etc.; influx of summer residents; specific industry generating large amounts of waste, etc..

o Data regarding the amount of MSW disposed for that town may not be completely captured in reports submitted to DEP and that the data is under review. Therefore the MSW recycling rate for this municipality was not calculated

** Denotes Non-MSW - not included in the column calculations for "% Combined of Total MSW Recycled".

FY2009 QUALIFIERS FOR DATA USED TO CALCULATE MSW RECYCLED & DISPOSED

Recycling Data Qualifiers:

- ◆ Recycling data is based on (1) CT permitted solid waste recycling facility reports submitted to the CT DEP for FY2009 (bottles, cans, and paper) and (2) the FY2009 Annual Municipal Recycling Reports submitted to the CT DEP.
- ◆ We have found that even though they submit recycling reports to DEP, many municipalities do not report the tonnage of all the materials generated within their town and recycled because those figures are often difficult to obtain.
- ◆ Figures for tonnages of material recycled generally do not include all the non-residential material collected for recycling – such as recyclables backhauled by national retail chains to out-of-state distribution centers for recycling.
- ◆ Tonnages generally do not include glass, metal, and plastic recycled through the bottle deposit law infrastructure.
- ◆ Tonnages do not include: most of the commercially recycled scrap metal, automobile scrap metal, waste oil recycled by businesses or garages, or most of the storage batteries which are recycled through the storage battery deposit infrastructure.
- ◆ The tonnage of leaves recorded as being recycled (composted) at municipal sites is usually estimated on the basis of cubic yards. The reliability of the conversion factor may be affected by the moisture content of the leaves.
- ◆ An attempt is made to estimate tonnages of yard and food waste home composted and tonnages of grass “grasscycled” based on municipal descriptions of their programs to promote these waste reduction strategies.
- ◆ Tonnage of landclearing and demolition material reported recycled by a municipality is listed as “bulky waste”. However, that tonnage is not included in the MSW recycling rate
- ◆ Tonnages of material reported as “recycled” reflect the amount of MSW reported collected for recycling - not necessarily the amount actually used to make products. Contamination may be disposed at either the recycling processing facility or at the mill or manufacturing facility using the material to make a product and is not subtracted from the tonnages reported recycled by each municipality.

MSW Disposal Data Qualifiers

- ◆ FY2009 MSW disposed for each municipality is based on data submitted to the CT DEP by CT permitted solid waste facilities and by CT municipalities and is contingent upon the accuracy of reporting by both the facility and the haulers delivering the MSW to the facilities.
- ◆ Data regarding MSW hauled directly out-of-state for disposal is not reported to DEP. Therefore, there may be additional disposal tonnages attributable to some towns.
- ◆ Tonnages of MSW do not always include the tonnage of bulky MSW (furniture, carpets, etc.) which is often reported to DEP as “bulky waste” or “construction and demolition (C&D)” waste.
- ◆ MSW disposal figures represent residential and non-residential disposal.

Comparing Town Recycling Rates

Please keep in mind that it is somewhat misleading to judge the success of a municipality’s recycling program by arbitrarily comparing one town’s recycling rate to that of another town because:

- 1) Recycling potential varies from municipality to municipality and can be affected by the town’s demographics
 - For example – towns with higher per capita incomes tend to generate more newspapers and magazines – which contribute to higher potential recycling rates.
 - Recycling in multi-family dwelling can present greater challenges – but can be successful with the implementation of effective recycling strategies.
- 2) The city or town of origin of MSW reported disposed or recycled by Connecticut SW facilities is not always accurate or complete on a town-by-town basis.
 - Since the recycling percentage for a city or town is based on both the MSW disposal rate and the MSW recycling rate, inaccurate municipal MSW disposal rates and/or recycling rates will result in inaccurate municipal recycling percentages.

The above qualifiers need to be considered when trying to compare one town’s recycling percentage or rate to that of another town.
