

**FY2009 Destinations and Amounts of Material Reported Sent out for [Recycling](#) from Connecticut Permitted Solid Waste (SW) Facilities**

Tonnages presented in the tables below are based on FY2009 data submitted to the Connecticut Department of Environmental Protection (as of 5/10/2011) by Connecticut recycling facilities, volume reduction facilities (VRFs or VRPs), regional recycling transfer stations, and municipal composting sites. The data represents material sent out for [recycling](#) from those facilities, i.e. **it does not represent all Connecticut material recycled**. See [data qualifiers](#) listed at the end of this report regarding examples of CT material marketed for recycling but not reported to DEP and, as a result, not included in the tables below. **Material incinerated for energy (except for waste oil) would not be considered "recycled"**. However, some SW facilities may have misreported wood burned for energy as "recycled". **Material used as landfill alternative daily cover material is not considered "recycled"**. Material reported sent out for recycling from one CT solid waste facility to another CT solid waste facility would be represented twice in the data presented below.

Questions? Comments? Corrections? Please contact [Judy Belaval](#) at the CT DEP Bureau of MM&CA at (860) 424-3237

**Recycling Destination Types Listed in Table 1**

Destination Type	Definition
<b>Broker</b>	A company which markets the recyclables for a recycling facility (in lieu of the recycling facility marketing the material itself).
<b>Composting Facility</b>	A facility which receives source separated organic wastes and uses accelerated biological decomposition under controlled aerobic or anaerobic conditions to process those wastes and produce a soil amendment product.
<b>End User</b>	Entity which uses recyclables to make a product e.g. manufacturer, paper mill, etc.
<b>Municipal Composting Site</b>	See definition for "composting facility". The finished compost or mulch may be used by the municipality and/or made available to residents; sent to a composting facility for sale; etc. <b>The figures presented below represent the amount of organic material received at the municipal compost site – not the amount sent out from that site.</b>
<b>Recycling Facility</b>	A facility which processes recyclable material to market specifications and markets the material.
<b>Scrap Metal Processor</b>	A company which processes and markets only scrap metal.
<b>Volume Reduction Plant (VRP)</b>	A solid waste (SW) facility permitted to process and reduce the volume of the waste it receives. Some facilities recycle some or all of the waste they receive; others only reduce the volume (by compaction, shredding, incineration, etc). The types of waste received and the methods of processing vary by the SW permit conditions.

**TABLE 2 - FY2009 Glass Aggregate Not Included in Table 1**

Material Type	Reporting Facility which Sent Glass Aggregate to a Landfill for Cover Material or	State of Destination	Destination Type	Tons Sent
GLASS –CONTAINERS AND MIXED GLASS AGGREGATE	A M H - KENSINGTON (BERLIN - MURPHY RD RECY – Reported sending glass containers and glass aggregate to two CT VRP facilities – but neither VRP facility reported any glass marketed	CT	CT C&D VRPs	Glass Aggregate 2692.29 Glass Containers 2199.53
GLASS - MIXED AGGREGATE	IPC - HARTFORD RECYCLING (MID-CT)	MA	Landfill - Alternative Cover	8,288.70
GLASS - MIXED AGGREGATE	WILLIMANTIC WASTE PAPER (RECYCLE-PAPER)	CT	Landfill - Alternative Cover	6,083.66

**Data Qualifiers:**

- ◆ Recycling data presented above is based on FY2009 CT permitted solid waste (SW) facility reports regarding material sent out from their facility for recycling **and only represents the material processed for recycling and reported sent out from those facilities.** For example *it does not include:*
  - waste oil which does not pass through a CT permitted SW facility;
  - recyclables (including electronics) direct hauled to end users (e.g. paper mills) or to out-of-state recycling destinations;
  - recyclables backhauled by national retail chains to out-of-state distribution centers for recycling;
  - glass, metal, and plastic recycled through the CT bottle deposit law infrastructure;
  - scrap metal marketed by CT scrap metal processors (the scrap metal processors are not required to report on scrap metal marketed);
  - automobile scrap metal;
  - lead acid storage batteries which are recycled through the CT vehicle battery deposit infrastructure.
  - bricks, asphalt, concrete processed at aggregate facilities which only process clean fill
- ◆ **Please be aware that material reported sent out for recycling from one CT solid waste facility to another CT solid waste facility is represented twice in the above data.**
- ◆ Tonnages presented for municipal compost sites represents material received – not the amount sent out.
- ◆ Tonnages of recyclable material reported “sent out” from CT permitted solid waste facilities may not necessarily reflect the amount actually used to make products. For example, if sent out to a broker or to another recycling facility for further processing – that secondary facility may not have recycled all the material sent to them. In addition some material received at a manufacturer or paper mill for recycling, may be disposed because it is considered a contaminant or because it does not meet the mill specifications. .
- ◆ Some facilities inaccurately reported wood waste burned for energy as being recycled.
