\*\*\* In 2014 the new record management system in place (CMIS-II) included a detention stay variable that calculated the length of stay using the first admission date and the final release date. In prior years, the detention stay variable was calculated by assessing the various date and movement codes in the system to create a detention stay variable.  
Due to changes in the calculation methodology, 2014 average stay should not be compared to past years.
