

Core Responsibilities of a Third Party Verifier

Must not be affiliated with the owner of the generation unit for which it is reporting;

Perform on-site inspection of the output meter(s) of the generation unit on a not less than annually basis;

Determine that the readings for each reporting period do not exceed the technical capabilities of a generation unit of its type, capacity, and location, and the normal operating parameters of the particular unit;

Inform the generation unit's owner or operator if and when the output of the unit is higher or lower than the range expected for the unit, so that appropriate remedial action can be taken;

Input the metered data into the unit's New England Power Pool Generation Information System (NEPOOL GIS) Asset ID accurately and on time, via the Third Party Verifier's own Third Party Meter Reader account at the GIS; and

Maintain well-organized, detailed records of all of the above, which are subject to inspection by the Public Utilities Regulatory Authority.
